Name:  
Species: Canine  
Breed:  
Sex:  
Color:  
Markings:  
Birth Date:

Yes / No Is the above information correct?

I hereby authorize the performance of the following procedure(s):

---

---

Do you have a Doctor preference for this procedure? YES/NO Who? \_\_\_\_\_

Yes / No My pet is currently on medications.

Please list any medications and dosage of medications (including aspirin):

---

---

Yes / No My pet is currently receiving heartworm prevention or has tested negative for heartworms within the last 30 days.

Yes / No I understand that the procedure to be performed requires the use of anesthesia.

Yes / No I give the permission for the performance of any life saving procedure deemed necessary by the attending veterinarian.

### PLEASE READ CAREFULLY AND SIGN

Like you, our greatest concern is for your pet while he/she undergoes anesthesia. Because of this concern, we strongly recommend a pre-anesthetic blood profile be performed prior to surgery. The profile maximizes safety by alerting the doctors to the presence of anemia, kidney, and/or liver disease, which could compromise your pet's ability to handle anesthesia.

The results of this profile can alert your Doctor to either adjust anesthetic levels or to delay today's procedure. In addition, today's values will establish a normal baseline from which to judge your pet's health in future years. The cost below will be in addition to the cost of the procedure.

The cost of the pre-anesthetic profile is:

Under 7 years of age: \$41.87

7 years of age and over: \$97.60

Yes I accept the pre-anesthetic bloodwork.

No I decline the pre-anesthetic bloodwork.

### Surgical IV fluids

Our doctors recommend the administration of surgical fluids to maintain the pet's blood pressure and hydration.

The cost of the Surgical IV Fluids is: \$56.83

Yes I accept the Surgical IV fluids.

No I decline the Surgical IV fluids.

### Pain Management Medication

The administration of pain management medication has been shown to speed the recovery process as well as lead to greater patient comfort. Therefore pain management medication is highly recommended. The cost is \$17.00-20.06 in addition to the cost of the procedure.

Yes I accept to provide pain management medication.

No I decline pain management medication.

### Microchip

A permanent microchip is inserted just below the skin's surface on your pet. This microchip is programmed with a code that can be identified with a hand held scanner. This procedure is most easily accomplished while your pet is under anesthesia. The cost is \$45.51, in addition to today's procedure.

Yes I accept the microchip.

No I decline microchip.
